

Massimo Bottini is currently an Associate Professor at the University of Rome Tor Vergata (Rome, Italy). Prof. Bottini currently leads the Laboratory of Biochemical Nanotechnology at the Department of Experimental Medicine of the University of Rome Tor Vergata. He has been the recipient of fellowships/grants from the Juvenile Diabetes Research Foundation (JDRF), the Arthritis National Research Foundation (ANRF), the Chinese Academy of Sciences President's International Fellowship Initiative (CAS-PIFI), the European Commission and the University of Rome Tor Vergata. In 2011 and 2012, Prof. Bottini was awarded a John Vaughan Scholar of the ANRF. Prof. Bottini has published 74 papers in peer-reviewed journals and 5 book chapters. His research is focused on the assessment of the biophysical and biochemical properties of extracellular vesicles linked to biomineralization during physiological and pathological processes. He has also been developing biocompatible nanosystems to improve the delivery of molecules and biomacromolecules to joints for the treatment of osteoarthritis and rheumatoid arthritis. He teaches Biochemistry at the Faculty of Medicine and Surgery. He also gives yearly courses about the principles of Biochemical Nanotechnology at the Faculty of Medical Engineering of the University of Rome Tor Vergata, at the Faculty of Medicine of the University of Sao Paulo (Ribeirao Preto, Brazil), and at the University of the Chinese Academy of Sciences (Beijing, China).
