

Sanchari Deb is currently associated with Power and Control Laboratory of School of Engineering, University of Warwick as EUTOPIA Science and Innovation Fellow. Earlier, she was associated with Smart e fleet group of VTT Technical Research Centre as ERCIM Fellow. She did her PhD from Indian Institute of Technology, Guwahati on 'Charging Infrastructure Planning for Electric Vehicles'. She did her ME and BE from Birla Institute of Technology, Mesra and Assam Engineering College respectively. Her research interests broadly covers different aspects of power and energy such as e mobility, charging infrastructure planning, Artificial intelligence applications in power and energy, microgrid planning, distribution network planning, local energy systems with cogeneration, Vehicle Grid integration, optimization, metaheuristics algorithms, tool development for charging station placement, machine learning applications, power system reliability, intelligent transport, autonomous vehicle, quantum computing applications, solar based charging infrastructure for Electric Vehicles (EVs), climate change, circular economy.
