

Amin Farkhondehfal did his PhD in chemical engineering at Politecnico di Torino. After that he started to work in IIT as postdoc researcher for 3 years. He was also electrochemical engineer consultant for Hysystech. He is currently working as researcher in VITO.

His main research fields are electrochemical analysis, electrocatalytic performance evaluations and cell design. He has more than 20 publications, two book chapters and two patents, mostly with the focus of electrocatalytic reduction of CO₂.

He also has extensive experience in hydrogen electrolyzers and electrochemical stack design.
