

Guido Fellet is a researcher at the Department of Agricultural, Food, Environmental and animal Sciences of the University of Udine. His research interests include (i) the study of the uptake of pollutants by plants (ii) the use of biochar for environmental management (iii) the application of nanotechnologies in agriculture. In particular, he is interested in the use of nanomaterials from agricultural wastes as slow release carrier of plant nutrients, to reduce the impact of crop fertilization on the environment. He teaches Phytotechnologies for the master degree in Environmental Science and Technology at the University of Udine.
