

Barbara Ferrucci is a researcher at the Fusion and Technology for Nuclear Safety and Security Department of the Bologna research centre in Italy. She received her doctorate in Nuclear Engineering from the Bologna University. Her current research interests include the study of the structural and energetic properties of materials for innovative applications, and the evolution release scenarios of radionuclides from nuclear waste repositories. She is involved in the technical support activities to the Italian Authority in verifying the application of the Comprehensive Nuclear-Test-Ban Treaty (CTBT). She has participated and is also currently involved in EU funded projects.
