

Sara Francesconi is currently Researcher in Plant Pathology at DAFNE. She obtained her PhD in Plant and Animal Sciences at DAFNE in July, 2021 with a Thesis dissertation entitled “Exploring novel green, high-tech and molecular mechanisms for the control and early detection of Fusarium head blight in durum wheat” with a final evaluation of Excellent with honour. Her main research activities are focused on employing novel bio-based solutions to control fungal and plant pathogens and to disclose the genetic mechanisms behind plant-pathogen interactions.
