

Doctoral degree in Chemistry and PhD in Biophysics, she is Researcher at the Department of Experimental Medicine, University of Genova. She works at Laboratory of Biophysics and Nanotechnology, her main research interests are structural proteomics, nanocrystallography, Langmuir-Blodgett protein nanofilms and multilayers studied by X-ray diffraction and scattering at synchrotron and XFEL. She worked in following institutions:

- Biodesign Institute, Arizona State University, USA,
- European Synchrotron Radiation Facility (ESRF), France.

Her teaching activity at UNIGE includes lectures on Structural biology and Nanotechnology in master's degree course "Medical-pharmaceutical Biotechnology" (in English).
