

Melania Reggente received a joint PhD in physical chemistry at the University of Strasbourg and Sapienza University of Rome. In 2017 she joins the lab of Prof. Palkowski at the Clausthal University of Technology to work on the development of resin-free sandwich materials for biomedical applications. She is currently postdoc at the EPFL in the laboratory of nanobiotechnology and her main research topics focus in optimizing living biophotovoltaics systems through bioengineering and material science approaches.
