

Francesca Rodà received her master's degree in Pharmaceutical Chemistry and Technologies (CTF) at the University of Turin in 2020. During her experimental thesis she focused on the evaluation of the effect of cryoprotectant substances in the freeze-drying of liposomes. Then, she spent one year at Laboratory of Nanomedicine and Clinical Biophotonics (LABION), working on the biophotonic characterization of nanocarriers for neurological disorders and on Raman spectroscopy analysis of saliva for diagnosis and monitoring of chronic respiratory diseases. From January 2022, she is a PhD student in Clinical and Experimental Medicine (curriculum Nanomedicine, Medicinal and Pharmaceutical Sciences) at Università di Modena e Reggio Emilia.
