

Philip Schäfer obtained his master's degree in Nanostructure Technology at the Physics Department of the Julius-Maximilians-Universität Würzburg in 2012. During his PhD in Physical Chemistry (2013-2016) at the Université de Bordeaux, he investigated the self-assembly of organic nanostructures by various fluorescence microscopy techniques and atomic force microscopy. In 2017 he joined the Sales & Application Team of neaspec GmbH (now Attocube Systems AG, ALX: nanoscale analytics) which has been developing and commercializing scattering-type Scanning Near-field Optical Microscopy and spectroscopy (s-SNOM) since 2007.
