

Jacopo Zasso graduated in Pharmaceutical Biotechnology at the University of Milan in 2012 and then he moved to CIBIO, University of Trento, where he obtained his PhD in Biomolecular Sciences and pursue his post-doctoral studies focussing on the development of *in vitro* models of neurodegenerative disorders and neural tumours using human pluripotent and neural stem cell systems. In 2021, Jacopo joined the Automated Stem Cell and Organoid Facility (ASCOF), at Human Technopole, Milan, where he has been involved in providing scientific support in the fields of stem cell biology and disease modelling and the translation of these processes in automation.
